

TAYLAN ÖZTÜRK

Software Developer

✉ 1taylanozturk@protonmail.com |  GitHub |  LinkedIn

PROFILE

Focused on building practical applications across full-stack development, systems programming, and applied software engineering. Experienced with Python, C, Django, and React through personal, freelance, and competition projects, with particular interests in low-level systems, algorithms, and application development.

EDUCATION

Yaşar University

BSc in Management Information Systems

2026 - Present

İzmir, Türkiye

SKILLS & LANGUAGES

Languages: Turkish (Native) · English (Fluent)

Technical: Python · C/C++ · Rust · JavaScript · Django · SDL3 · Qt · Linux

PROJECTS

filmocabulary Django · HTMX · Pydantic

Personal Project · 2026

- Built a language-learning platform that turns movie subtitles into personalized vocabulary exercises.
- Integrated LLMs and OpenSubtitles to automatically generate, validate, and ground vocabulary in real movie dialogue, with token-efficient prompting and processing.
- Implemented adaptive quizzes, learning-progress tracking, subtitle caching, and an HTMX-based interactive interface.

sockfish C · SDL3

Personal Project · 2025

- Built a chess engine and desktop client in C with UCI protocol support.
- Optimized negamax search through alpha-beta pruning, transposition tables, quiescence search, null-move pruning, late-move reductions, and history-based move ordering.
- Added multithreaded search and automated benchmarking for evaluating and improving engine performance.

crop-irrigation-program Python · Tkinter · Arduino

Teknofest 2024

- Developed a central software system for the team's Teknofest finale preparation, bringing together project materials and supporting the prototype demonstration.
- Built a Tkinter-based remote-control interface for circuit management and Arduino communication.
- Integrated sensor data from the crop-monitoring system to control the prototype irrigation valve based on the collected measurements.

voltran-survey-app Django

FLL 2023-2024

- Developed and deployed a Likert-scale survey application for Team Voltran, enabling real-world data collection from residents in İzmir/Karşıyaka.
- Implemented sequential questionnaires, five-point response handling, and persistent aggregation of collected survey results.

voltran-math React · Django

FLL 2022-2023

- Led the development of a React/Django tool for comparing the energy consumption and projected costs of Voltran's proposed street-lighting solution against conventional lighting.
- Implemented energy and cost calculations, result persistence, and comparative visualizations to evaluate and communicate the project's technical approach during the FLL competition.

realtor-site React · Django

Freelance Project · 2022

- Developed and deployed a full-stack real-estate website as a freelance project for a local realtor, with dynamic property listings, image galleries, and contact functionality.
- Built the React/Django application with responsive, multilingual UI and production deployment through Netlify.

AWARDS & ACHIEVEMENTS

Teknofest Finalist — 9th Place, Ag-Tech Competition · #1 Best Presentation Award 

Antalya, Türkiye

First Lego League — Innovative Project Award 

İzmir, Türkiye
